### Editorial Review

#### Amazon.com Review

*Cosmos* was the first science TV blockbuster, and Carl Sagan was its (human) star. By the time of Sagan's death in 1996, the series had been seen by half a billion people; Sagan was perhaps the best-known scientist on the planet. Explaining how the series came about, Sagan recalled:

I was positive from my own experience that an enormous global interest exists in the exploration of the planets and in many kindred scientific topics--the origin of life, the Earth, and the Cosmos, the search for extraterrestrial intelligence, our connection with the universe. And I was certain that this interest could be excited through that most powerful communications medium, television.

Sagan's own interest and enthusiasm for the universe were so vivid and infectious, his screen presence so engaging, that viewers and readers couldn't help but be caught up in his vision. From stars in their "billions and billions" to the amino acids in the primordial ocean, Sagan communicated a feeling for science as a process of discovery. Inevitably, some of the science in *Cosmos* has been outdated in the years since 1980--but Sagan's sense of wonder is ageless. --*Mary Ellen Curtin*

#### Review

"Magnificent . . . With a lyrical literary style, and a range that touches almost all aspects of human knowledge, *Cosmos* often seems too good to be true."—*The Plain Dealer*

"Sagan is an astronomer with one eye on the stars, another on history, and a third—his mind's—on the human condition."—*Newsday*

"Brilliant in its scope and provocative in its suggestions . . . shimmers with a sense of wonder."—*The Miami Herald*

"Sagan dazzles the mind with the miracle of our survival, framed by the stately galaxies of space."—*Cosmopolitan*

"Enticing . . . iridescent . . . imaginatively illustrated."—*The New York Times Book Review*

#### From the Inside Flap

This visually stunning book with over 250 full-color illustrations, many of them never before published, is based on Carl Sagan's thirteen-part television series. Told with Sagan's remarkable ability to make scientific ideas both comprehensible and exciting, **Cosmos** is about science in its broadest human context, how science and civilization grew up together.

The book also explores spacecraft missions of discovery of the nearby planets, the research in the Library of ancient Alexandria, the human brain, Egyptian hieroglyphics, the origin of life, the death of the Sun, the evolution of galaxies and the origins of matter, suns and worlds.

Sagan retraces the fifteen billion years of cos-mic evolution that have transformed matter into life and consciousness, enabling the Cosmos to wonder about itself. He considers the latest findings on life elsewhere

and how we might communicate with the beings of other worlds.

**Cosmos** is the story of our long journey of discovery and the forces and individuals who helped to shape modern science, including Democritus, Hypatia, Kepler, Newton, Huy-gens, Champollion, Lowell and Humason. Sagan looks at our planet from an extra-terrestrial vantage point and sees a blue jewel-like world, inhabited by a lifeform that is just beginning to discover its own unity and to venture into the vast ocean of space.

## Users Review

### From reader reviews:

#### **Olga Noone:**

Why don't make it to be your habit? Right now, try to ready your time to do the important action, like looking for your favorite guide and reading a reserve. Beside you can solve your short lived problem; you can add your knowledge by the guide entitled *Cosmos*. Try to face the book *Cosmos* as your buddy.
