No Two Alike: Human Nature and Human Individuality By Judith Rich Harris

A groundbreaking theory of personality.

The author of the controversial book *The Nurture Assumption* tackles the biggest mystery in all of psychology: What makes people differ so much in personality and behavior? It can't just be "nature and nurture," because even identical twins who grow up together?same genes, same parents?have different personalities. And if psychologists can't explain why identical twins are different, they also can't explain why each of us differs from everyone else. Why no two people are alike. Harris turns out to be well suited for the role of detective?it isn't easy to pull the wool over her eyes. She rounds up the usual suspects and shows why none of the currently popular explanations for human differences?birth order effects, for example, or interactions between genes and environment?can be the perpetrator she is looking for. None of these theories can solve the mystery of human individuality. The search for clues carries Harris into some fascinating byways of science. The evidence she examines ranges from classic experiments in social psychology to cutting-edge research in neuroscience. She looks at studies of twins, research on autistic children, observations of chimpanzees, birds, and even ants. Her solution is a startlingly original one: the first completely new theory of personality since Freud's. Based on a principle of evolutionary psychology?the idea that the human mind is a toolbox of special-purpose devices?Harris's theory explains how attributes we all have in common can make us different. This is the story of a scientific quest, but it is also the personal story of a courageous and innovative woman who refused to be satisfied with "what everyone knows is true." 12 b/w illustrations

Editorial Review

From Publishers Weekly

Why do identical twins who grow up together differ in personality? Harris attempts to solve that mystery. Her initial thesis in *The Nurture Assumption: Why Children Turn Out the Way They Do* is replaced here with a stronger, more detailed one based on evolutionary psychology. Reading this book is akin to working your way through a mystery novel—complete with periodic references to Sherlock Holmes. And Harris has a knack for interspersing scientific and research-laden text with personal anecdotes. Initially, she refutes five red herring theories of personality differences, including differences in environment and gene-environment interactions. Eventually, Harris presents her own theory, starting from modular notions of the brain (as Steven Pinker puts it, "the mind is not a single organ but a system of organs"). Harris offers a three-systems theory of personality: there's the relationship system, the socialization system and the status system. And while she admits her theory of personality isn't simple, it is thought provoking. Harris ties up the loose ends of the new theory, showing how the development of the three systems creates personality. Harris's writing is highly entertaining, which will help readers stick with her through the elaboration of a fairly complex theory.

From Scientific American

Where does adult personality come from? Why are we all different? These are the questions energizing Judith Rich Harris's new book.

Harris, a former textbook author turned popular writer, dives right in, sharpening her focus by looking at identical twins. After subtracting the share contributed by their mutual genes—about 45 percent—studies show that adult identical twins are no more alike in personality than people plucked at random from a crowd, even though the siblings were raised in the same home, by the same parents, with identical schooling.

Where, then, do personality differences come from? Harris begins, in a savage fashion familiar to readers of her Nurture Assumption, by recounting factors that do not contribute to personality differences. She debunks dozens of studies by psychologists—especially the "developmentalists" and "interventionists" who believe that better parenting or school environments can affect how children turn out—by pointing out where they have fudged numbers and twisted results. She rejects the basis of psychoanalysis, stating there is no evidence that talking about childhood experiences has therapeutic value. She also maintains that learned behaviors do not readily transfer from one situation to another, noting that even babies behave differently to fit different environments.

To answer her opening questions, Harris then develops a complex scheme based on "the modular mind," a framework set forth by Harvard University evolutionary psychologist Steven Pinker and others. (Harris herself has no doctorate and is housebound by systemic sclerosis and lupus, two autoimmune disorders.) She describes three modules—the relationship system, the socialization system and the status system—and explains how each contributes its part to making us who we are. The relationship system starts in the cradle as infants study and learn the faces and voices of the people around them, collecting information that helps form personality. The socialization system adapts people to their culture. The status system takes all the information collected during childhood and adolescence and shapes and modifies our personalities in accord with our environments.

Harris's last chapter lays out her theory in tabular form, explaining how each module interacts with the others to produce our distinct personalities. It is lavishly footnoted, like the rest of the book, shoring up her strategy of pointing out the failings of other models and then proposing her own. Her goal, she writes, is to explain the variations in personality that cannot be attributed to variations in people's genes. After saying she believes she has succeeded, she throws down her gauntlet: "I will leave it to other people to test my theory."

Jonathan Beard

From Booklist

The controversial author of *The Nurture Assumption* (1998)--in which it was argued that peer relations, not nature or nurture, were the driving force in child development--continues her exploration of what makes us the way we are. This time Harris offers a "scientific detective story" aimed at uncovering the secret of human individuality. Armed with new psychological theories and cutting-edge, high-tech tools, Harris takes a multidisciplinary approach to answering the nagging question of why identical twins raised in the same household often differ, sometimes dramatically, in personality? Harris delivers an answer (and, yes, it's sure to be controversial), but it's the quest itself that will prove most fascinating for general readers, who will marvel at the step-by-step accumulation of facts, as the author marshals her argument by adeptly juggling a wide array of tools, from new theories of evolutionary psychology to behavioral genetics and linguistics.

Expect some off-the-book-page attention. *David Pitt*

Users Review

From reader reviews:

Lori Hunt:

Here thing why that No Two Alike: Human Nature and Human Individuality are different and reputable to be yours. First of all looking at a book is good nevertheless it depends in the content of the usb ports which is the content is as delicious as food or not. No Two Alike: Human Nature and Human Individuality giving you information deeper and different ways, you can find any reserve out there but there is no e-book that similar with No Two Alike: Human Nature and Human Individuality. It gives you thrill examining journey, its open up your eyes about the thing that will happened in the world which is might be can be happened around you. You can bring everywhere like in playground, café, or even in your means home by train. If you are having difficulties in bringing the printed book maybe the form of No Two Alike: Human Nature and Human Individuality in e-book can be your option.

Nancy Jackson:

Reading a e-book tends to be new life style in this particular era globalization. With reading through you can get a lot of information that will give you benefit in your life. With book everyone in this world can certainly share their idea. Publications can also inspire a lot of people. Lots of author can inspire their very own reader with their story or maybe their experience. Not only situation that share in the books. But also they write about the ability about something that you need instance. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that you can get now. The authors nowadays always try to improve their proficiency in writing, they also doing some research before they write on their book. One of them is this No Two Alike: Human Nature and Human Individuality.

Jerry Orosco:

Beside this specific No Two Alike: Human Nature and Human Individuality in your phone, it may give you a way to get nearer to the new knowledge or facts. The information and the knowledge you can get here is fresh through the oven so don't always be worry if you feel like an aged people live in narrow village. It is good thing to have No Two Alike: Human Nature and Human Individuality because this book offers to you readable information. Do you often have book but you don't get what it's facts concerning. Oh come on, that will not end up to happen if you have this within your hand. The Enjoyable arrangement here cannot be questionable, just like treasuring beautiful island. Use you still want to miss that? Find this book and read it from today!

Leslie Woodson:

Don't be worry in case you are afraid that this book may filled the space in your house, you might have it in e-book technique, more simple and reachable. This kind of No Two Alike: Human Nature and Human Individuality can give you a lot of good friends because by you looking at this one book you have issue that they don't and make anyone more like an interesting person. This particular book can be one of one step for you to get success. This reserve offer you information that possibly your friend doesn't realize, by knowing more than additional make you to be great men and women. So , why hesitate? Let me have No Two Alike: Human Nature and Human Individuality.
