### Editorial Review

#### Review

"...an essential resource for an statistician involved in product development and testing...available in an attractive and reasonably priced format." (*Technometrics*, August 2005)

"Researchers in insulation and engineers in general...will find this an outstanding reference book that will be used constantly." (*IEEE Electrical Insulation Magazine*, May/June 2005)

#### From the Publisher

In recent years, much useful methodology has been developed in accelerated testing--this book makes it available to practitioners. Many products last so long that life testing at design conditions is impractical. However, these products can be life-tested at high-stress conditions to yield failures quickly. Such testing saves much time and money--and analyses of data from an accelerated test yield needed information on product life at design (low stress) conditions. Presents practical, modern, statistical methods for accelerated testing including test models, analyses of data and plans for testing. Each topic is self-contained for easy reference. Coverage is broad and detailed enough to serve as a text or reference. Contains many real test examples along with data analyses, computer programs and references to the literature.
