Brain Stimulation in Psychiatry: ECT, DBS, TMS and Other Modalities By Charles H. Kellner

The field of brain stimulation is advancing at rapid pace with a growing number of techniques now approved for the treatment of psychiatric illness. This text acts both as a concise, quick reference for experienced practitioners and a guidebook for residents learning about clinical brain stimulation techniques. The techniques covered include: • Electroconvulsive therapy (ECT) • Deep brain stimulation (DBS) • Transcranial magnetic stimulation (TMS) • Vagus nerve stimulation (VNS) • Magnetic seizure therapy (MST) • Transcranial direct current stimulation (TDCS) All aspects of these treatments are covered, from patient selection, through the implementation of the technique, to patient aftercare. Potential future applications are discussed and select, up-to-date reference lists guide practitioners to the most important further reading around each technique. Portable, concise and easy to navigate, covering all the need-to-know information, Brain Stimulation in Psychiatry is essential reading for practitioners, residents and medical students in psychiatry and neurology.

Editorial Review

Review

"This pocket-sized book is up to date, practical, and user friendly and is highly recommended as an easy reference guide for anyone practicing psychiatry or neurology. It will certainly be an asset to physicians familiar with and using ECT as well as for residents, medical students, and others new to brain stimulation techniques."

Journal of Clinical Psychiatry

About the Author

Charles H. Kellner is Professor, Department of Psychiatry, Mount Sinai School of Medicine, New York, NY, USA.

Users Review

From reader reviews:

Flora Young:

As people who live in the modest era should be revise about what going on or information even knowledge to make these individuals keep up with the era which can be always change and move forward.
