Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture)

By Tony Nowatzki, Michael Ferris, Karthikeyan Sankaralingam, Cristian Estan, Nilay Vaish, David Wood

Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture) By Tony Nowatzki, Michael Ferris, Karthikeyan Sankaralingam, Cristian Estan, Nilay Vaish, David Wood

In the last few decades computer systems and the underlying hardware have steadily become larger and more complex. The need to increase their efficiency through architectural innovation has not abated, but quantitatively evaluating the effect of various choices has become more difficult. Performance and resource consumption are determined by complex interactions between many modules, each with many possible alternative implementations. We need powerful computer programs to explore large design spaces, but the traditional approach of developing simulators, building prototypes, or writing heuristic-based algorithms in traditional programming languages is often tedious and slow. Fortunately mathematical optimization has made great advances in theory, and many fast commercial and academic solvers are now available. In this book we motivate and describe the use of mathematical modeling, specifically optimization based on mixed integer linear programming (MILP) as a way to design and evaluate computer systems. The major advantage is that the architect or system software writer only needs to describe what the problem is, not how to find a good solution. This greatly speeds up their work and, as our case studies show, it can often lead to better solutions than the traditional approach.

In this book we give an overview of modeling techniques used to describe computer systems to mathematical optimization tools. We give a brief introduction to various classes of mathematical optimization frameworks with special focus on mixed integer linear programming which provides a good balance between solver time and expressiveness. We present four detailed case studies -- instruction set customization, data center resource management, spatial architecture scheduling, and resource allocation in tiled architectures -- showing how MILP can be used and quantifying by how much it outperforms traditional design exploration techniques. This book should help a skilled systems designer to learn techniques for using MILP in their problems, and the skilled optimization expert to understand the types of computer systems problems that

MILP can be applied to.

Editorial Review

Users Review

From reader reviews:

Ruth Jones:

Why don't make it to be your habit? Right now, try to prepare your time to do the important work, like looking for your favorite guide and reading a publication. Beside you can solve your short lived problem; you can add your knowledge by the reserve entitled Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture). Try to make book Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture) as your friend. It means that it can to be your friend when you really feel alone and beside that course make you smarter than ever. Yeah, it is very fortuned for you. The book makes you more confidence because you can know every thing by the book. So , let us make new experience as well as knowledge with this book.

Christy Brodersen:

The book Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture) make one feel enjoy for your spare time. You can use to make your capable more increase. Book can for being your best friend when you getting strain or having big problem together with your subject. If you can make examining a book Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture) to get your habit, you can get a lot more advantages, like add your own capable, increase your knowledge about some or all subjects. You are able to know everything if you like wide open and read a e-book Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture). Kinds of book are a lot of. It means that, science book or encyclopedia or other folks. So , how do you think about this reserve?

Kathleen Hernandez:

Now a day people who Living in the era where everything reachable by match the internet and the resources within it can be true or not demand people to be aware of each details they get. How individuals to be smart in obtaining any information nowadays? Of course the answer then is reading a book. Studying a book can help folks out of this uncertainty Information specially this Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture) book since this book offers you rich info and knowledge. Of course the data in this book hundred % guarantees there is no doubt in it everbody knows.

Phillip Vargas:

Nowadays reading books be a little more than want or need but also get a life style. This reading practice give you lot of advantages. The advantages you got of course the knowledge your information inside the book that improve your knowledge and information. The data you get based on what kind of e-book you read, if you want send more knowledge just go with schooling books but if you want really feel happy read one having theme for entertaining including comic or novel. The actual Optimization and Mathematical Modeling in Computer Architecture (Synthesis Lectures on Computer Architecture) is kind of publication which is giving the reader capricious experience.
